

## ARE UNIVERSITY DEGREE PROGRAMMES IN DANGER?

Gregory Makrides

**Abstract.** *The evolution of education and its impact in the learning process, including methods of learning, is setting significant questions as to whether the education systems in many countries are responding to research results that are asking stakeholders to adapt their education systems to the needs of learners and to the needs of the employers and industry.*

*Learning, Competences, Skills and Employment is a chain that cannot break; otherwise we may see many university programmes discontinued and many school students choosing to receive learning outside the school system. In this presentation, we will discuss the issue and present the solution that the EU funded project “European STEAME Teacher Facilitators Academy” started to develop since June 2023.*
